G+H NOISE CONTROL
Customized Engineering Solutions

Calculation program vibration isolation

With our SISO software, you can calculate the required elastic bearing elements for vibration isolation and insulation of structure-borne.

Single point and area/foundation vibration isolation are supported.

Optimized calculation with different parameters such as:

- Isolation efficiency
- Natural frequency
- Tuning ratio
- Damping ratio
- Dimensions
- Height under load
- Accessories

Software does not require internet connection. With SISO software you can save and manage your projects. Calculations can be saved in PDF format. You can find the software **here**.
